surface or root fixed

Overview

A low-maintenance, cost-effective way to control access to car parks and private areas, on a permanent or temporary basis. The pivot post is strong enough for roads up to 8 m wide and can still be operated by one person.

The aluminium box section pivot turns on a zinc plated shaft and two heavy duty stainless steel bearing blocks. A finely tuned counterbalance weight makes it easy to lift, and it locks in the raised or lowered position.

Key features

- **Counterbalanced arm** easy to lift
- **Aluminium boom** red/white or yellow/black
- **Stainless steel bearings** heavy duty
- **Locks up and down** padlock and keys supplied
- **Lockable end rest** included

Where it is used

Car parks, private roads, yards, industrial sites, loading areas and site entrances where vehicle access needs controlling.

A manual barrier is a low-cost, low-maintenance alternative where an automatic barrier is not needed.

Root fixed or surface mounted?

Root fixed posts are concreted into the ground, the strongest and most permanent option.

Surface mounted posts bolt down onto an existing concrete base, and can be moved later if needed.
